**About the Book**

In this book on molecular therapeutics, the authors discuss and teach about the two natural miracle molecules, molecular hydrogen and molecular ozone. Ozone as a therapeutic molecule has been in clinical use for nearly a century, while molecular Hydrogen has just made its appearance a few decades ago. Molecular ozone is available on this earth at high altitudes, mountains, waterfalls, and is also produced while lightning strikes. On the contrary, molecular hydrogen is alien to earth, despite being the most abundant element and molecule in this universe.

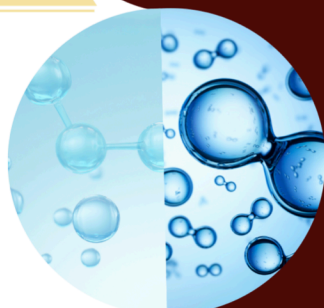

Our planet is 65 percent water, and that contains two atoms of hydrogen for every atom of oxygen. In fact our own body is over two thirds of water which is hydrogen and oxygen. Oxidation and antioxidation are activities happening at mitochondrial level constantly and oxygen and hydrogen between them form a large part of our body constituents. Nascent oxygen is a singlet and a very powerful oxidising agent much much more powerful and effective than hydrogen peroxide or bleaching powder. Molecular hydrogen is essentially an antioxidant and augments the capabilities of other molecules like glutathione, vitamin c and other water soluble vitamins!

This book will teach the reader all about producing and using these molecules in patients and normal individuals with routes of administration, safe dosages, indications, cautions and show examples and results.
